

VUETRACK

About VUEMED

VUEMED is a global healthcare IT company dedicated to transforming the healthcare supply chain through groundbreaking technologies that capture point-of-care and clinical inventory transactions data in real time, as well as cloud-based data intelligence and analytics. Our Software as a Service (SaaS) inventory management and data solutions work as a coordinated suite of tools to track and document the usage of medical products, devices and supplies, and to provide savings and additional revenue capture. Our system can also be scaled up to track assets and people (e.g. clinical staff, patients, reps).

About VueTrack™

VueTrack™ is a powerful yet easy-to-use software and web-based technology that provides hospitals with the ability to track, document and control clinical products and supplies from their entry point in the hospital all the way to the patient at the point of care.

Simple to implement, utilize and expand throughout the hospital environment, VueTrack™ literally transforms the way hospital departments are run. Users gain complete control over their clinical inventory and are able to document patient cases with precision and efficiency, as well as run meaningful and applicable web-based reports within seconds, using real-time, accurate data.

Employed in a variety of specialty hospital departments (OR, Cath, EP, IR and GI labs), VueTrack™ can be customized to accommodate the specific workflow and data capture needs of any procedural area.

Key Benefits of VueTrack™

- 1 Accurate supplies documentation and patient records
- 2 Precise billing and increased revenue capture while mitigating the consequences of billing errors
- 3 Access to reliable, real-time data intelligence
- 4 Results-oriented, strategic and analytic reports within seconds
- 5 Reliable recall management
- 6 Waste prevention
- 7 Reduction in purchases due to smarter par levels
- 8 Alignment of inventory composition to clinical needs
- 9 Greater staff productivity and physician satisfaction
- 10 Affordable monthly subscription model
- 11 Quickly pays for itself with a typical ROI greater than 3 to 1 annually

VueTrack™ Testimonials

“Before VueTrack™ we were just eyeballing our inventory to see what was missing and what needed to be reordered. We were running out of stock or ending up with a lot of expired products. Now, no running out of stock!”

– Inventory Coordinator, Boston, MA

“Most specialty procedure departments waste between 5% and 10% of their products because they simply don’t know which products are expiring when. Most departments order new products to simply replace what they use or by eyeballing the inventory. My department has cut costs significantly with VueTrack™.”

– Director of Radiology, San Antonio, TX

How VueTrack™ Works

Implementation of VueTrack™ is straightforward and effortless. After uploading the VueTrack™ software onto a hospital department's existing Windows PCs, Android tablets or Apple devices, and then connecting the barcode scanner provided by VUEMED, VueTrack™ is ready to go. It's that simple. VueTrack™ is interface-ready and highly customizable to support all technology set-ups, and includes constant free upgrades.

Once our software has been uploaded onto a hospital department's existing computers, users can begin to track products as items enter the inventory and when they are consumed during a patient procedure or removed from the stock (e.g., returns, exchanges), using manufacturer-printed barcodes on product packages. There's no need for costly clinical room remodeling, expensive cabinets or hardware. Plus, our barcode scanning technology works with all classes of barcodes (e.g., GS1, HIBCC) used by manufacturers.

Upon scanning the barcoded information off the product package, our system automatically identifies and displays the corresponding SKU from our master database of hundreds of thousands of products from hundreds of manufacturers. All inventory transactions – whether adding supplies to the stock, returning items to manufacturers, or using products for patient procedures – are accurately recorded and then sent to the VUEMED cloud to update in real time the hospital's inventory availability, value and usage.

VueTrack™ enables users to access instantly a variety of powerful, real-time cloud-based reports to analyze their inventory-related activities. For instance, within seconds users can track expiring or recalled products, items used by physicians, or products that are below set par levels that need reordering.

The VueTrack™ Difference At a Glance

- Affordable monthly subscription model
- No capital costs or expensive cabinets or hardware to buy
- Runs on existing hospital PCs using a standard barcode scanner
- Powered by a comprehensive database of products and their barcodes
- Easy to use by all staff members; minimal training required
- Exceptional customer service 24/7
- Interface-ready and highly customizable to support all environments
- Never becomes obsolete due to regular and free upgrades
- Available on multiple platforms: laptop/desktop; tablet (iDevice, Windows, Android)
