

VUETRACK^{RF}

What Is VueTrack-RF?

VueTrack-RF™ is a groundbreaking solution that automatically tracks medical devices and supplies in real time with 99.5% accuracy, using advanced RAIN RFID [ultra-high frequency (UHF) RFID] equipment and inexpensive, versatile, and passive tags. VueTrack-RF turns any space – whether a supply room, procedure room, or warehouse – into a fully controlled inventory space using hospitals' existing shelving and storage systems.

VueTrack-RF's proven technology for tracking, documenting, and reporting inventory transactions and data in real time is bringing transformative automation to healthcare that other industries have already embraced.

How Does VueTrack-RF Work?

1. Employs a light overhead infrastructure to continuously and automatically track the movement and location of all clinical supplies and then report that information to our Cloud.
2. Uses safe and inexpensive global standards compliant (GS1 EPC) passive Gen 2 RFID tags from any manufacturer.
3. Works with our VueBin™ solution to create an RFID-powered Kanban system that automates the replenishment signaling of bin-based, high-velocity, or inexpensive med surg or commodity items.

Why Use VueTrack-RF?

- Makes the monitoring and accounting of clinical supplies efficient, accurate, and easy. Hands-free, no human interaction, virtually error-proof.
- Alerts users to a product's location, as well as unapproved or unexpected movements.

- No proprietary RFID storage cabinets needed. Works with existing storage solutions in place.
- Supports UDI regulatory compliance and meets UDI requirements for all classes of devices.
- Ensures product availability, optimizes par levels, and reduces inventory size.
- Increases data reliability and accuracy for inventory replenishment and reordering.
- Automates expiration tracking to significantly decrease the occurrence of wastage.
- Ensures a prompt response to, and handling of, recalls.
- Increases billed revenue.
- ROI realization begins with the first procedure. VueTrack-RF pays for itself several times over within the first year; benefits continue to accrue thereafter.

Benefits for the Supply Chain

VueTrack-RF automatically tracks inventory and product movement throughout any facility. VueTrack-RF allows the hospital supply chain, clinicians, and medical devices and supplies manufacturers to share knowledge in real-time of the whereabouts of products in specific departments and locations. This visibility and transparency enable:

- ✓ Expiration control and elimination of waste.
- ✓ Appropriate SKU-based par levels that ensure product availability.
- ✓ Customized composition of consigned and non-consigned inventory.
- ✓ Swift and efficient recall management.
- ✓ Product tracking all the way to the patient.
