VueTrack

Unlocking Inventory Efficiency Through Barcode Scanning

VueTrack

About VueMed

VueMed is a global healthcare IT company dedicated to transforming the healthcare supply chain through groundbreaking technologies that capture point-of-care and clinical inventory transactions data in real time, as well as cloud-based data intelligence and analytics.

Our Software as a Service (SaaS) inventory management and data solutions work as a cohesive suite of tools to track and document the usage of medical products, devices and supplies, and to provide savings and additional revenue capture.

About VueTrack

VueTrack™ is a powerful, yet easy-to-use barcode scanning and cloud-based technology that provides hospitals with the ability to track, document, and manage medical devices and supplies from their entry point in the hospital all the way to the patient at the point of care.

Simple to implement, utilize, and expand throughout the hospital environment, VueTrack enables users to gain complete control over their clinical inventory and document patient cases with precision and efficiency. VueTrack also creates meaningful and applicable web-based reports within seconds. All with real-time, accurate data.

Employed in a variety of specialty hospital departments (OR, Cath, EP, IR and GI labs), VueTrack can be customized to accommodate the specific workflow and data capture needs of any procedural area.

> " Before VueTrack we were just eyeballing our inventory to see what was missing and what needed to be reordered. We were running out of stock or ending up with a lot of expired products. Now, no running out of stock!"

Inventory Coordinator, Boston, MA

VueTrack Benefits

- Precise billing and increased revenue capture while mitigating the consequences of billing errors
- Reliable and quick recall management
- Results-oriented, strategic, and analytic reports available within seconds
- Waste prevention through effective expiration management
- Accurate supplies documentation and patient records
- Access to reliable, real-time data intelligence
- Reduction in purchases due to smarter par levels
- Alignment of inventory composition to clinical needs
- Greater staff productivity and physician satisfaction
- Guaranteed 200% ROI

How VueTrack Works

Setup & Connect

Upload software to existing devices and connect the scanner. No costly remodeling or hardware needed. VueTrack is interface-ready and highly customizable.

Scan & Track

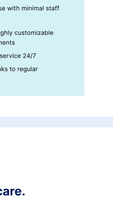

Scan manufacturer barcodes to auto-identify SKUs and record transactions in real time using VueMed's proprietary database of products from hundreds of manufacturers.

Analyze & Take Action

Access powerful cloud reports to instantly track expiring and recalled products, adjust par levels, monitor orders, optimize inventory composition, and more.

> Most specialty procedure departments waste between 5% and 10% of their products because they simply don't know which products are expiring — when most departments order new products to simply replace what they use or by eyeballing the inventory. My department has cut costs significantly with VueTrack.

Director of Radiology, San Antonio, TX

The VueTrack Difference at a Glance

Affordable SaaS model

- No capital costs or expensive cabinets or hardware to buy
- Runs on existing hospital PCs using a standard barcode scanner
- Powered by a comprehensive proprietary cloud database of products and their barcodes

User-friendly, adaptable, and quality support

- Simple and ready to use with minimal staff training required
- Interface-ready and highly customizable to support all environments
- Exceptional customer service 24/7
- Evolutive solution thanks to regular and free upgrades

VueTrack By VueMed

Tracks every item using UDI. Visibility from delivery to point of care.

VueTrack provides information on supplies availability, inventory level, usage, and status (recall, expiration) across your facility in real time, so you're always in control.
